# Tugas HTML & CSS implementation

By muhammad zulzidan m  
Full stack web developer batch 7

---

---

## Tugas HTML & CSS

Buatlah landing page berdasarkan gambar berikut (sebagai contoh saja, boleh dimodifikasi sesuai ide masing-masing). Lalu, jelaskan bagaimana identifikasi setiap elemen, layout, dll yang ada pada page tersebut sebelum implementasi. Penjelasannya dalam bentuk file .doc/.pdf. Untuk file implementasi berupa file .html & .css

Catatan :

- Pilihan implementasi : boleh memilih menggunakan **HTML & CSS murni** atau **HTML & Framework Tailwind**
  - Aset-aset yang digunakan tidak harus sama pada gambar karena tugas ini adalah landing page versi sendiri.
-

---

# Identifikasi layout:

header

main

---

# Identifikasi Elemen header section:

This is header, we can wrap it in nav too,  
css is bg-black

## Img tag

for logo, add  
"harisenin  
bootcamp web  
developer" for  
alt for seo

This is a list of menu  
we can use ul tag,  
then inside li tag, then  
finally a tag or link

This div with  
button inside,  
we can use a  
or link too,  
but we style it  
as logo

# Identifikasi Elemen main section:

PS. I usually use h1 for a certain title keyword for seo, like in apple.com

The screenshot shows a dark-themed banner with a collage of small profile pictures in the background. The main text is white and green. Annotations with orange arrows point to various elements:

- h1**: Points to the main title "3854 Alumni\*".
- h2**: Points to the subtitle "Meraih Karier Impiannya".
- h4**: Points to the green text "Walau Pindah Jalur Karir.".
- p**: Points to the italicized text block starting with "\*Sejak Maret 2021, harisenin.com telah membantu 3854 muda-mudi Indonesia meraih impiannya terlepas dari latar belakang ekonomi dan sosial mereka.".
- button/ a tag for going to whatsapp**: Points to a green button with the text "Klik Untuk Konsultasikan Masa Depanmu. Gratis!".
- Image, svg, and a p**: Points to a row of three profile pictures, a 5-star rating, and the text "(4.9/5 dari 3854 Alumni)".
- Whatsapp button, link with fixed, add a notification to attrac us to click it**: Points to a circular WhatsApp icon in the bottom right corner with a red notification bubble.

Img with the screenshot of all alumni, then add a div to layer it with black about 85 percent of opacity to the text above it popped more, we z index to layer stuff.

---

**Thank you**
